

Jefster Farlei Fernandes Caixeta Júnior

Anápolis, Goiás, Brazil | P: +55 62 991 115 292 | jefsterfarlei@gmail.com | [Linkedin](#) | [Github](#)

Senior Backend Engineer with 10+ years of experience in Go and Java, building distributed systems and cloud-native platforms for fintech, ecommerce, and enterprise. Deep expertise in microservices, event-driven architectures, observability, and high-throughput APIs — with a consistent record of improving performance, reliability, and scalability at scale. Proven collaborator in remote, international environments across LATAM, the US, and Europe.

PROFESSIONAL EXPERIENCE

CODE 17 TEK (via Pepsico)

Senior Software Engineer

Remote

April 2023 – Present

- Architected and led development of a high-throughput API platform handling 1M+ daily transactions, integrating real-time AI/ML pipelines, third-party tracking and delivery systems, and ecommerce marketplaces with precision and sub-second reliability.
- Designed and built distributed infrastructure components, including rate limiting, Redis-backed coordination services, and multi-service orchestration patterns, implementing **CI/CD** pipelines, multi-environment deployment strategies and Infrastructure-as-Code practices.
- Engineered scalable data solutions using Cosmos DB with Cassandra API, handling distributed NoSQL workloads with high availability and low-latency access patterns across multi-region deployments.
- Led observability modernization using OpenTelemetry, centralizing distributed tracing, metrics standardization, and monitoring across services, significantly reducing mean time to resolution on production incidents.
- Delivered reusable backend frameworks and platform components in Go and Java, improving consistency, reliability, and developer velocity across a team of 3–5 engineers.
- Mentored engineers and partnered across engineering, product, and QA teams to establish architectural standards and drive quality improvements across the platform.
- **Tech Stack:** Go, Gin, Java, Spring Boot, Azure, Kubernetes, Redis, PostgreSQL, Cosmos DB, Kafka, OpenTelemetry, Terraform, GraphQL, GitHub Actions

NOVACOMP (via Bigticket)

Senior Software Engineer

Remote

May 2022 – April 2023

- Architected and delivered a Kafka-based notification platform for Bigticket (formerly Insurdata), a US insurance communication hub connecting insurers, brokers, and policyholders, achieving 99.9% delivery reliability and fully decoupling notification workflows from core business services.
- Optimized REST APIs and reactive backend microservices across the platform, reducing response times by 30% while improving scalability and reliability under high-concurrency insurance transaction loads.
- Engineered scalable data models and caching strategies for customer and policy domains, cutting query execution times by 40% through indexing optimization, query tuning, and in-memory caching.
- Built a full observability stack using Prometheus, Grafana, and Loki, enabling proactive anomaly detection and significantly reducing time to resolution on production incidents.
- Drove CI/CD cloud-native automation, code quality improvements, and backend modernization initiatives across Kubernetes and AWS environments.
- **Tech Stack:** Java 17, Spring Boot, Scala, Akka, Kafka, PostgreSQL, Docker, Kubernetes, AWS, Prometheus, Grafana, Loki, OAuth2, JWT, Vue.js, TypeScript

MIDWAY

Senior Software Engineer

Remote

May 2021 – May 2022

- Engineered core backend infrastructure supporting 10M+ daily financial transactions, improving throughput and latency through query optimization, indexing strategies, caching, and parallel processing across distributed services.
- Served as core backend engineer on the PIX implementation team, delivering Brazil's real-time payment protocol integration in compliance with Banco Central do Brasil standards and Open Banking requirements.
- Designed and optimized backend APIs and integration services for Open Banking initiatives, improving data retrieval performance by 40% while ensuring secure and reliable third-party integrations.
- Standardized API contracts and integration patterns across financial services, reducing partner onboarding complexity and accelerating third-party integrations.

- Implemented unit and integration testing strategies across critical payment flows, increasing platform stability and reducing production incidents.
- **Tech Stack:** Java 8 & 11, Spring Boot, REST, OAuth2, JWT, RabbitMQ, Redis, MongoDB, Oracle Database, Docker, Node.js, Camunda, SonarQube

QINTESS (via Dell)

Remote

Senior Software Engineer / DevSecOps

July 2020 – May 2021

- Led application security initiatives on Dell's private cloud platform, identifying and remediating vulnerabilities across backend services in compliance with OWASP Top 10 standards — strengthening security posture across a large-scale enterprise environment.
- Developed and maintained microservices for Dell's private cloud and IoT platform, improving scalability, resiliency, and operational reliability across distributed environments.
- Optimized backend services and REST APIs using Spring Boot, and led database and caching improvements involving Redis and MongoDB, reducing data retrieval times across high-traffic services.
- Implemented CI/CD automation pipelines with GitLab, Jenkins, and Azure DevOps, improving deployment reliability and embedding security checks into the delivery workflow.
- **Tech Stack:** Java 11, Spring Boot, PostgreSQL, DynamoDB, AWS, Kubernetes, Docker, OAuth2, JWT, OpenID Connect, Apache Camel, Azure DevOps, SonarQube

INDRA

Goiânia, Goiás

Senior Software Engineer

Feb 2019 – Jul 2020

- Built a geolocation-based disease monitoring system for the Goiás state public health department (SES), enabling real-time tracking and geographic visualization of disease spread across the state.
- Developed critical healthcare applications supporting tuberculosis treatment tracking and digital surgery scheduling workflows, improving operational efficiency across the public health system.
- Implemented backend integrations and CI/CD pipelines using GitLab, Jenkins, and Flyway across multiple healthcare platforms.
- **Tech Stack:** Java 8 & 11, Spring Boot, Angular, Node.js, PostgreSQL, REST, SOAP, Jenkins, GitLab

WGL

Anápolis, Goiás

Fullstack Engineer

Jan 2018 – Feb 2019

- Developed REST APIs and enterprise integrations for state and federal government applications, improving reliability and performance across public sector platforms.
- Enhanced geospatial systems using PostGIS and OpenLayers, improving geographic data visualization and infrastructure management workflows for government clients.
- **Tech Stack:** Java 8, Spring Boot, Angular, PostgreSQL, PostGIS, OpenLayers, AWS, OAuth2

PROGRAMAR

Anápolis, Goiás

Fullstack Engineer

Jan 2016 – Dec 2017

- Developed and modernized ERP and inventory management systems for retail and small business clients, improving operational workflows and stock control processes.
- Built responsive web applications and internal tooling, contributing to backend optimization and supply chain process improvements across multiple business domains.
- **Tech Stack:** Java 7, MySQL, JavaScript, jQuery, Bootstrap, HTML/CSS

EDUCATION

UniAnhanguera

Graduate Certificate in Applied Mathematics and Statistics

Expected July 2026

Focus on algorithms, probability, and statistical modeling for backend and data-intensive systems.

UniAnhanguera

MBA in Project Management with Agile Methodologies

July 2024

Agile project execution, team leadership, and delivery of scalable software solutions.

PUC Minas

Graduate Certificate in Solutions Architecture

July 2022

Focus on distributed systems design, cloud architecture patterns, scalability, and technology decision-making for complex systems.

Maurício Nassau

Associate Degree in Software Analysis and Development

2018 - 2020

Core training in OOP, databases, backend development, and full-stack systems.

OPEN SOURCE

GO

GoShortUniqueID — github.com/devjefster/go-short-unique-id

Developed an open-source Go library focused on generating compact, high-performance, unique identifiers optimized for distributed systems and backend services.

GoValidator — github.com/devjefster/go-validator

Created a validation framework for Go inspired by Java Bean Validation patterns, supporting extensible validation rules, date validation, and backend input validation workflows.

OpenAPI Surgeon — github.com/devjefster/OpenAPI-Surgeon

CLI tool that indexes monolithic OpenAPI 3.x specs into SQLite and resolves transitive schema closures per operation — built for teams managing large API surfaces without loading the full document.

JAVA

MicroCache — github.com/devjefster/microcache

Lightweight in-memory caching library with TTL expiration, LRU eviction, async loading, and optional disk persistence — built for high-throughput Java applications.

RUST

java-atlas — github.com/devjefster/java-atlas

Rust CLI that walks Java source trees and emits structured atlases in Markdown, JSON, and JSONL — optimized for LLM context loading and package-scoped search workflows.

Java Flow Mapper (jfm) — github.com/devjefster/java-flow-mapper

Rust CLI that maps Spring MVC request flows through controllers, services, and repositories — rendering control flow, Bean Validation constraints, and call graphs as Markdown, JSON, or Mermaid diagrams.

OTHER

Languages: English (Professional Working Proficiency), Spanish (Professional Working Proficiency), Portuguese (Native)

CERTIFICATIONS

AWS Certified Solutions Architect Associate

AZ-900 - Azure Fundamentals

DP-900 - Azure Data Fundamentals

LFC108 - Cybersecurity Essentials - Linux Foundation

SKF100 - OWASP® Top 10 Security Threats - Linux Foundation
